

Collection Card Management System

Introducing the easiest way ever to audit your MoneyClip Cashless Payment System - **Collection Card Management System (CCMS)**. Now the only step required to produce an audit report is to insert a loaded Collection Card into the card-reader attached to your PC. A PDF copy of the report simply appears on the screen.

CCMS is a freestanding software module designed to easily read, display, and store audit reports from MoneyClip Cashless Payment System devices.

Data Collection Cards are read by CCMS, and a PDF copy of the audit report is automatically displayed to the PC operator. The report is automatically saved, and can be printed at will.

CCMS can run independently of other MicroPayments audit programs (e.g. Debutil), or concurrently with them if more detailed analysis is required.

Sometimes, simpler is better.

Collection Card Management System

Steps to produce an audit report:

1. Insert a loaded Collection Card into the card reader on your PC.
2. Print the PDF that appears on the screen.
3. That's it.
4. Really, that's all that you have to do.
